Skill Mastery

Each spell and weapon class has its own skill level and progress bar. When the progress bar fills, the skill level increases by one. The higher the skill level, the more powerful the skill.

Weapons

At the end of battle, the skill level of any weapon a character is holding increases. If a character has two different types of weapons equipped, both skills will improve. As weapon skill improves, both the damage and accuracy of that type of weapon improve as well.

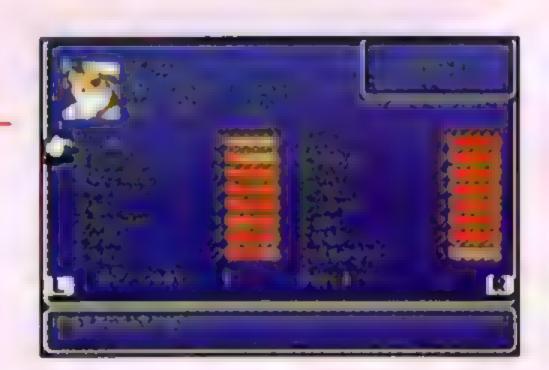

Shields

Like weapons, shields also have a skill level. As a character's shield skill level increases, his or her chance of evading attacks will improve.

Magic

Each magic spell has its own skill level. As the spell's level increases, its rate of success, effect, and potency all improve. You can also increase a spell's level by casting it outside of battle.

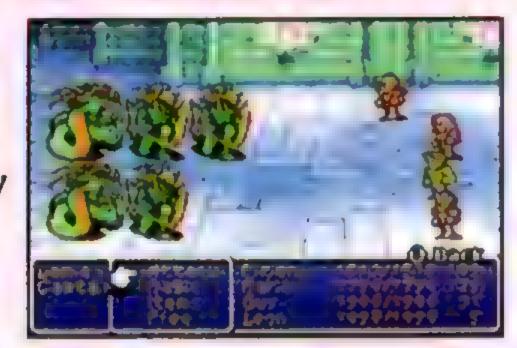

Character Development

The decisions you make during battle determine how your characters develop. Basically, the more a character uses an ability, the more it improves. You can't raise a character's attributes just by fighting battle after battle; your fighting style and actions affect how a character's attributes change over time.

· Characters do not improve when they flee a battle, are knocked

out, or are petrified.
